

Lab 4 Part II Using Arrays

Instruction Conventions

	<p>When the “process” icon appears in the box on the left, then this box will contain one or more instructions that you will need to follow.</p> <p>The instructions will be as specific as is practical but could be different for different users and computer configurations.</p>
	<p>When the “note” icon appears in the box to the left, this box will contain notes, hints, or tips that may be helpful to the lab activities.</p>
	<p><user input></p>
	<p>When the keyboard icon appears in the box to the left, the box above will contain a line of input to be entered by the user, and this box will contain an explanation of what the user input will do.</p>

1. Using a web browser, goto HWMath.net/IBCS and open the link [DaysAway.bas](#) file.

This is a program shell with an outline of the task you are asked to perform. Save this to your C: drive where you have `blasic.exe` installed and other BASIC programs.

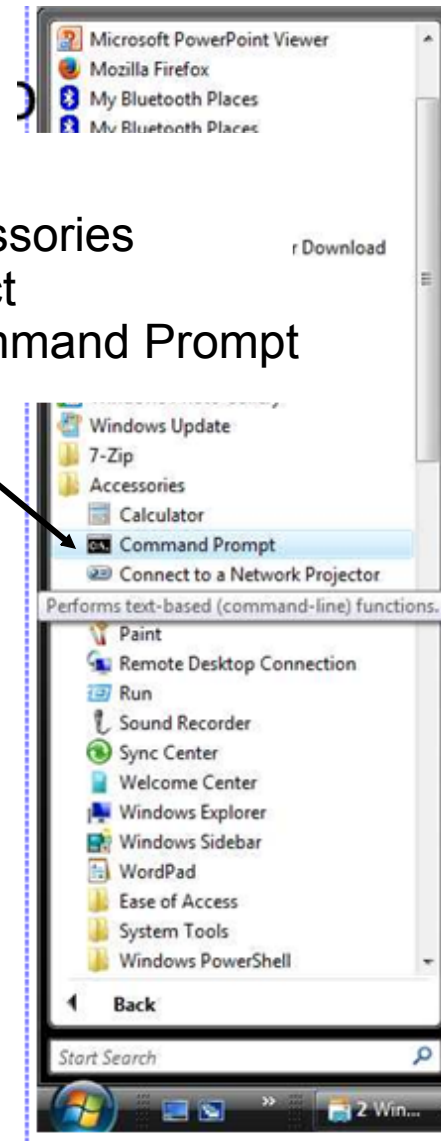

You can do this by starting Notepad, copying the text from the open `DaysAway.bas` program, or by right-clicking on the link and using:
Save Link As

1) From the start menu select All Programs

2) From Accessories Select Command Prompt

If you are using a different computer than you have used before, be sure to copy `blassic.exe` from the CD into your work space.

```
copy d:\blassic\blassic.exe
```

2. Add your name on line 110.
3. After line 200, insert the code to get the value of N from the user.
4. Complete the block of code to initialize the array D\$ so that entries 1 to 7 are complete - you can put this in any order you need to for your program to work today for any value of $n > 0$.
5. Add the calculation to figure out what day of the week it will be in N days.
6. Send the user some output, similar to the following:

```
C:\Users\Jibr>blastic DaysAway.bas
Enter the number of days from today:287
Today is Tuesday, in 287 days it will be Tuesday.
```

```
C:\Users\Jibr>blastic DaysAway.bas
Enter the number of days from today:8
Today is Tuesday, in 8 days it will be Wednesday.
```

```
C:\Users\Jibr>blastic DaysAway.bas
Enter the number of days from today:0
Today is Tuesday, in 0 days it will be Tuesday.
```

Challenge and Extension

Can you change the program so that if the user enters 0 for N the program still works?

Can you initialize the array and perform the calculation so that no special processing has to be performed no matter what N is?

```
C:\Users\Jibr>blassic DaysAway.bas
Enter the number of days from today:287
Today is Tuesday, in 287 days it will be Tuesday.
```

```
C:\Users\Jibr>blassic DaysAway.bas
Enter the number of days from today:8
Today is Tuesday, in 8 days it will be Wednesday.
```

```
C:\Users\Jibr>blassic DaysAway.bas
Enter the number of days from today:0
Today is Tuesday, in 0 days it will be Tuesday.
```
